The perfect combination of meteorological and hydrological forecast quality combined with real-time data from Meteomedia's measurement network is a one-of-a-kind runoff forecast basis: This comprises the foundation for the operational **E-Watch** forecast model, an innovative range of energy and hydrology sector products offered by **Meteomedia** and **DHI**.

Based on our inflow forecast model, power plant and network operators, traders or municipal providers are able to benefit from the collaboration of two market leaders. No matter whether you are interested in water temperature forecasts, inflow forecasts for dams and dam systems, hydropower forecasts or warnings in the event of flood hazard: Our extensive product range is unmatched anywhere.

Services

- Inflow forecasts for dams and dam systems
- Hydropower forecasts for individual power plants or entire regions
- Water temperature forecasts
- Water quality forecasts
- Warnings via SMS, pager, fax or e-mail
- Forecasts for all worldwide relevant catchment areas
- Forecasts by the hour
- Up to ten days in advance
- Multiple daily updates
- Data transfer via FTP server or e-mail
- Data formats: CSV or XML
- Situation monitoring and visualization in customer-specific online portals

Example: Meteomedia's Energy Services Portal

Advantages at a Glance

- Synergy of meteorological and hydrological/hydraulic know-how
- One-stop service thanks to the collaboration of two market leaders
- One of the most extensive meteorological measurement networks worldwide
- Leading forecast quality
- High-resolution inflow models
- Problem-appropriate water quality models
